

Explorit Everywhere!

Federated Search True Enterprise Search

Your Enterprise Search May Be Missing Critical Information

Knowledge workers demand easy access to all of their information, whether from internal sources, subscription databases or public websites. Most enterprise search solutions provide access to some of this data, but can't retrieve all of the information a researcher needs to stay current, informed, and competitive. Deep Web Technologies' integrated federated search, Explorit Everywhere!, is the future of Enterprise Search: It provides one interface – one search – for researchers to access all the information sources they need to get their work done. Achieve superior results through a powerful ranking engine, incremental results for faster response times, scalability and flexibility, all seamlessly integrated into your Enterprise Search Portal, Share Point, or your CMS or CRM system.

“36% of a typical knowledge worker's day is spent looking for and consolidating information spread across a variety of systems.” ~ IDC

Indexing Alone Can't Retrieve All of Your Data...

Explorit Everywhere! complements your existing Enterprise Search, quickly finding the information stranded in silos of information, licensed databases or public web sites that is not practical to index into your Enterprise Search. Using Explorit Everywhere, you can search any and all of your databases, whether internal or external, from a single search box. A true, enterprise search, Explorit Everywhere! fills the gap created by indexing alone, and keeps your users up-to-date with current information from the right sources.

Knowledge workers can only find the information required to do their jobs 56 % of the time. An enterprise with 1,000 knowledge workers loses an average of \$5.7 million annually to lost productivity due to employees searching for, but not finding, relevant information.

Internal Repositories

The Problem:

Many internal repositories / silos have specialized functionality or search interfaces used by a small subset of users. It is expensive to copy and keep the content current as part of the index.

The Solution:

Explorit Everywhere! finds and retrieves data in silos of information for a true, single search of all of your content.

Such as:

- R&D Databases
- Legacy Databases
- Manufacturing Databases
- Sales & Marketing Documents
- Email Repositories

Licensed Databases

The Problem:

Content owners and licensors of subscription content won't permit their content to be indexed. If they do, it can be cost prohibitive.

The Solution:

Explorit Everywhere! returns information from all of your external digital resources, increasing the ROI for your subscriptions.

Such as:

- Licensed Content
 - Factiva
 - Knovel
 - FDC Reports
 - ebrary

Public Databases

The Problem:

Similar to licensed databases, most public databases can't be indexed as content owners won't provide "dumps" of their databases. If they did, the cost to keep the index current would be high.

The Solution:

Explorit Everywhere! accesses Deep Web content in real-time, helping you to stay competitive and up to date with new information.

Such as:

- Government Databases
- Competitor Web Sites
- Supply Catalogs
- Social Media
- Patent Databases

Make All of Your Content Easy to Find

If your content isn't findable, your researchers may be missing information - the proverbial needle in the haystack. Deep Web Technologies builds real-time *connections* to your silos of information, wherever they are, using our next-generation technology, Explorit Everywhere!. Explorit Everywhere! finds your critical information and returns it to your users, ranked and organized for efficient discovery of what's most important to get your job done.

Custom Connectors

After all, it's your information and your search. Deep Web Technologies develops connectors to plug in to a variety of content formats, authentications and access platforms that information may hide behind. We have a database of over 3000 standard connectors to information resources, and each connector can be customized to add your authentication and search variables. And, we'll create connectors to the repositories you need without sacrificing quality. **Search all of your sources from a single search box.** It's as simple as that.

Robust Web Services-Based API

Deep Web Technologies' platform is designed around open-systems. Our technology can plug-in to your existing systems, providing powerful features through a robust set of Web Services-based APIs. These APIs, web 2.0 capable, enable you to quickly integrate Explorit Everywhere! exactly where you need it.

Secure Authentication

Deep Web Technologies can integrate Explorit Everywhere! with your existing authentication, such as LDAP, if available from within your company. Or, we can store user credentials within Explorit Everywhere!, simplifying your authentication process. We can provide first-level or second-level support, depending on the particular needs of your company.

Centralized Administration, Reports and Statistics

Our administration takes the difficulty out of managing Explorit Everywhere!, and greatly simplifies implementation and issue handling. Our reports and statistics help you assess your user activity and information sources, identifying source use to help you improve ROI on premium content.

Installed Deployments

Explorit Everywhere! isn't a big, bulky master index that needs constant maintenance, input and support. Instead, it complements your existing technologies, elegantly adding the finishing touches for a complete search portal. While Explorit Everywhere! can be hosted at a Deep Web Technologies data center, it may also be securely deployed behind your firewall to ensure proprietary content stays that way. Explorit Everywhere! is simple to maintain, and includes 24/7 support from Deep Web Technologies.

The generation of information is doubling every 20 months. Knowledge workers are overwhelmed by the sheer volume of information available to them, across a myriad of repositories.
